

To Whom It May Concern,

October 19, 2009

Green Energy Council

As president of the Green Energy Council I would like to thank you for choosing to install a Final Flat Roof "Green Roof" restoration system. Not only are you protecting and preserving your building for decades to come, you are also making a positive impact on the environment that will last for generations. Final Flat Roof with its Energy Star Rating helps reduce global warming and the heat island effect. By restoring and recycling your existing roof with Final Flat Roof you help keep 20 million tons of toxic roofing out of our landfills.

If you are a business owner of a commercial building Final Flat Roof can help you qualify as a Energy Star compliant building that is current with all Federal Executive Orders mandated by the DOE, EPA and the President. Laws mandate that federal, local government agencies and programs that are funded and supported by federal grants may only enter into contracts to lease or occupy office space with facilities that are Energy Star qualified and compliant with the new environment laws. By utilizing Final Flat Roof you will be expanding your opportunity to secure new clientele as well as protecting the environment.

Thank you for your efforts to work with GEC and Final Flat Roof to protect and preserve our environment.

Sincerely,

Ralph Avallone  
President & CEO  
International Green Energy Council
